

Colour Capture

1. Open the **QCapture-Pro** or **Image-Pro** software
2. Select the **Acquire** file menu and select the **Video/Digital** option
3. Click on **Preview** to see a live image
4. Select a Settings file if required (settings files are generated by users or by engineers when the system is installed. If not used, the camera will operate on the last used settings)
5. To calculate the exposure select **Calc Auto Exp**
6. Adjust the exposure if required
7. Right-click in the preview window, select the **Auto-White balance** option and follow the on-screen prompts
8. Click **Snap** to acquire an image
9. Save the image to your desired location
